A report by Sahil Murti

Executive Summary.

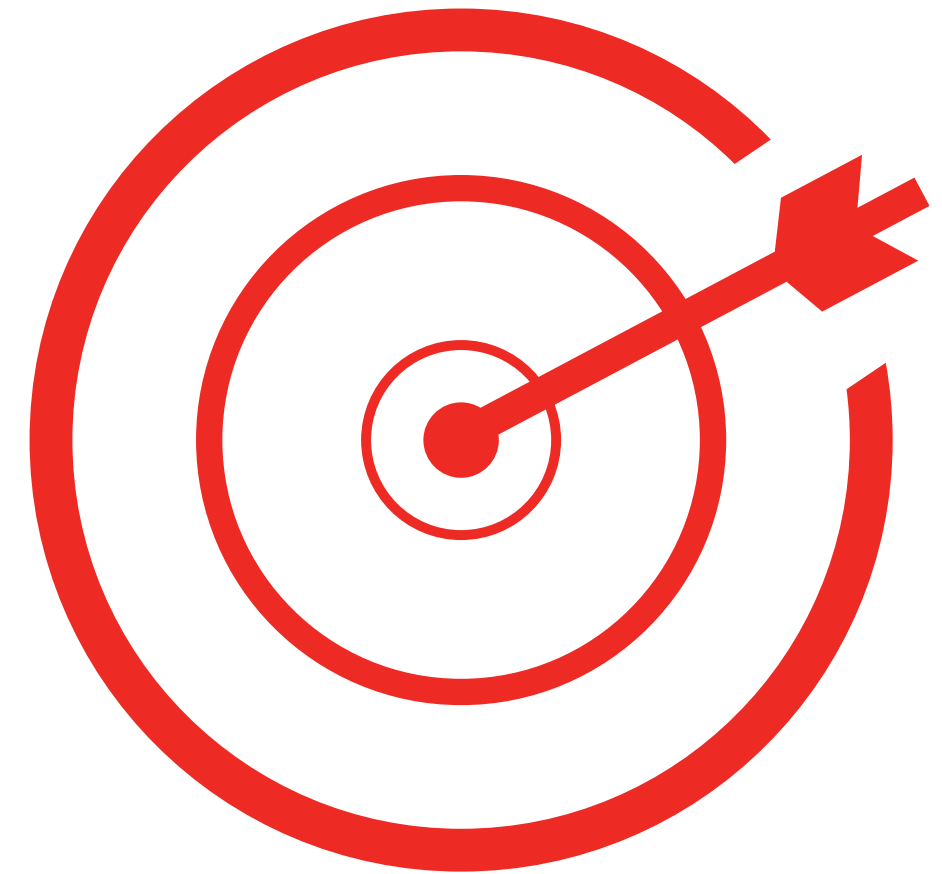

Background:

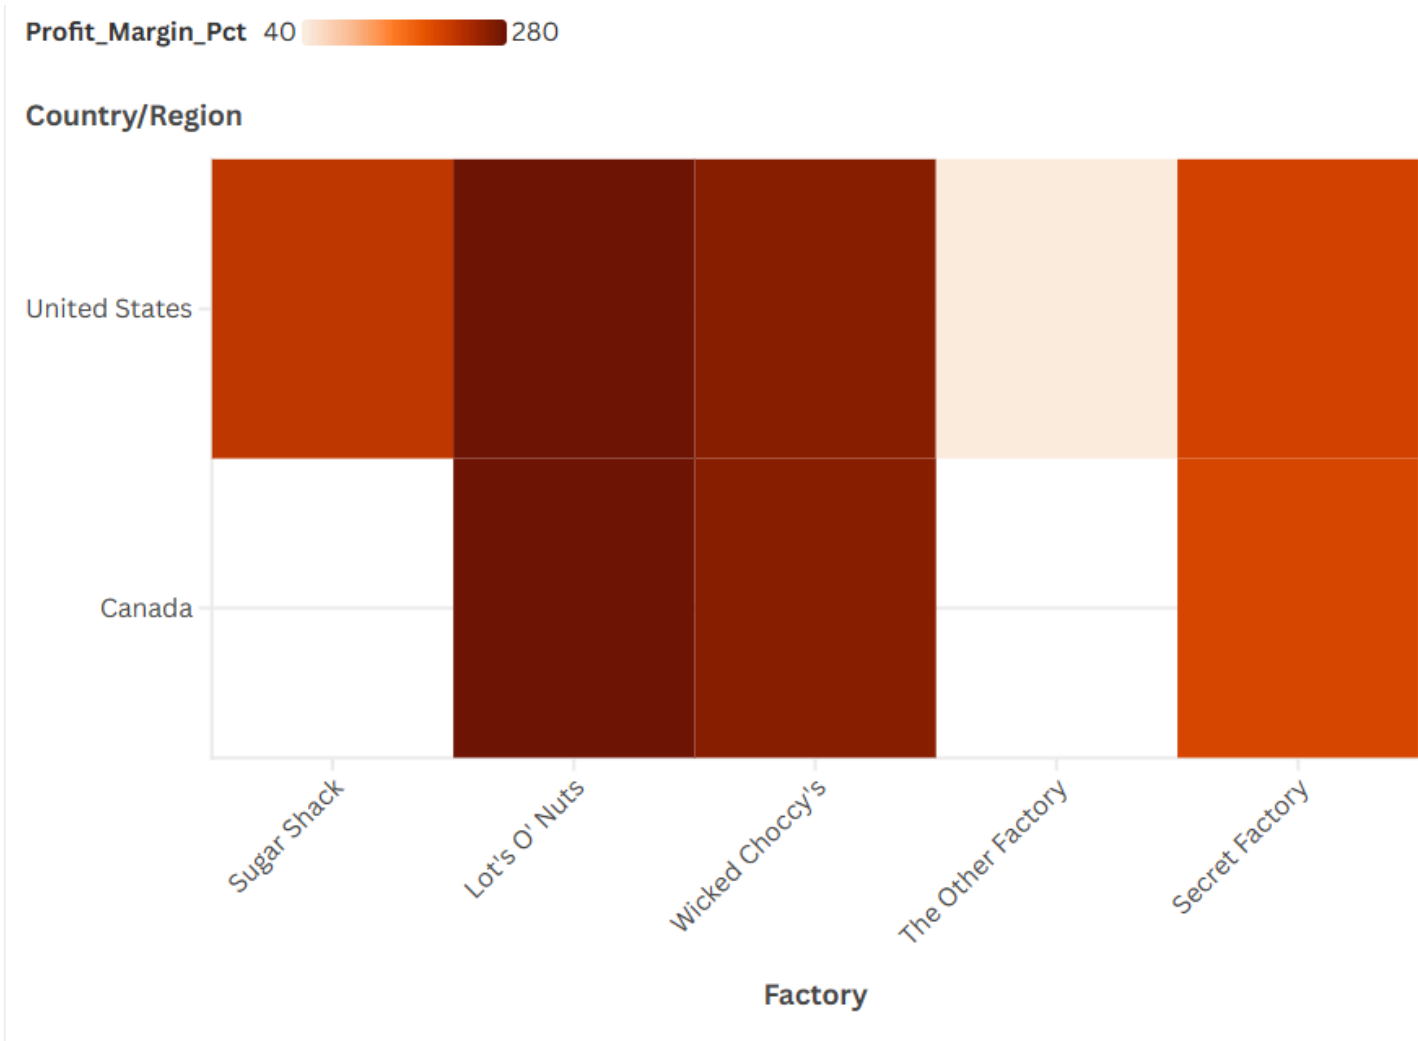

Overview of the national candy distributor's operations across factory hubs, customer locations, and product lines.

Core Business Objectives

- 🏭 Factory Profitability & Unit Cost
- 🎯 Target vs. Actual (FY24)
- 📈 Revenue Growth & Seasonality
- 📦 Pareto Product Optimization

Supply Chain & Factory Efficiency

↑ **Top Performance: "Lot's O' Nuts" and "Wicked Choccy"**

↓ **Weak Performance: "The Other Factory"**

Business Question:

Which manufacturing plants deliver the highest profit margins, and where are unit production costs highest relative to volume?

Key Strategic Insight:

- Workload Rebalancing: Route high-volume candy SKUs to plants with lowest cost-per-unit to protect gross margins.
- Margin Remediation: Audit manufacturing plants operating below baseline target margin to address localized raw material or operational inefficiencies.
- Regional Sourcing Optimization: Align production hubs closer to primary destination markets to lower landed unit costs.

Target vs. Actual Performance (2024).

Business Question:

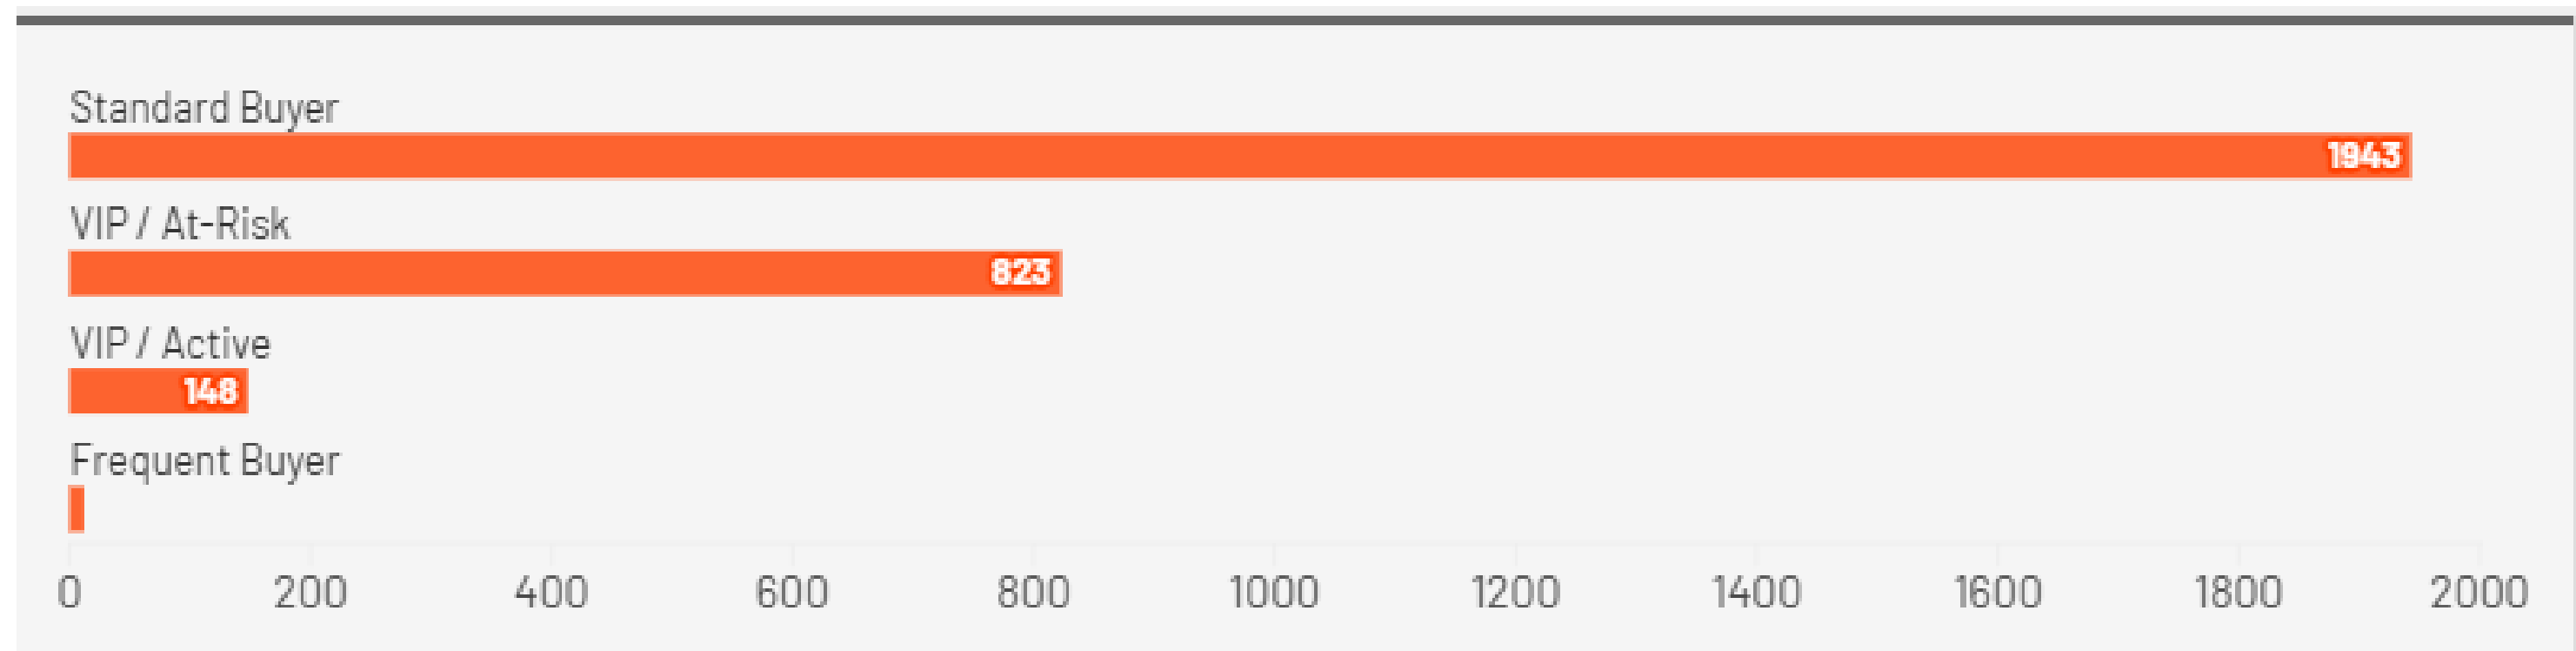

Which commercial divisions achieved their 2024 sales targets, and where did we experience the largest performance shortfalls?

Key Strategic Insight:

- Regional Growth Drivers: Identify and study high-performing divisions exceeding target quotas to replicate best sales practices across other regions.
- Underperformance Remediation: Allocate targeted promotional budgets and re-evaluate pricing strategies for divisions falling short of 2024 benchmarks.

Customer Segmentation & Retention

Business Question:

Who are our top B2B distributors, how frequently do they reorder, and which high-value accounts are at risk of churn?

Key Strategic Insight:

- Proactive Account Management: Automate alerts for account managers when high-spend VIP distributors exceed 100+ days without reordering.
- Incentive Campaigns: Offer bulk-purchase volume discounts or loyalty incentives to shift Frequent Buyers into high-spend VIP tiers.
-

Product Portfolio Optimization

Business Question:

Which top 20% of candy products drive 80% of total global revenue, and where is the long tail?

Key Strategic Insight:

- Supply Chain Prioritization: Guarantee zero stock-outs and secure continuous factory production capacity for Tier 1 SKUs.
- Catalog Rationalization: Review low-margin, bottom 20% long-tail products for SKU consolidation, price repricing, or phase-out.

Strategic Insights & Recommendations

4 Strategic Action Pillars

Supply Chain Workload Rebalancing

- **Action:** Shift high-volume candy production to manufacturing plants with the lowest unit costs.
- **Impact:** Maximizes gross profit margins while auditing underperforming facilities to lower production bottlenecks.

VIP Churn Prevention & Account Protection

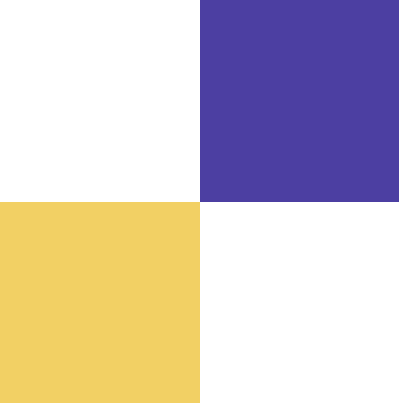

- **Action:** Automate early-warning outreach triggers for high-spend B2B accounts inactive for 100+ days.
- **Impact:** Protects top-line recurring revenue and targets frequent buyers with tiered bulk-order incentives.

Quota Calibration & Sales Realignment

- **Action:** Re-evaluate go-to-market strategies for divisions that missed 2024 target benchmarks.
- **Impact:** Reallocates regional marketing budgets toward underperforming zones to close variance gaps in FY25.

Catalog Rationalization (Pareto Rule)

- **Action:** Guarantee 100% stock availability for Tier 1 (core 80% revenue drivers).
- **Impact:** Phase out or re-price bottom-tier, low-velocity SKUs to unlock working capital and warehouse space.

Top 4 Core Analytics Pillars & Methodologies

Pillar	Focus Area	Key SQL Functions Used
1. Factory Unit Economics	Operations & Supply Chain	Multi-table JOIN, ROUND(), NULLIF(), GROUP BY
2. Target Attainment	Commercial Variance	WITH (CTEs), CASE WHEN, YEAR(), Math Operators
3. RFM Segmentation	B2B Customer Retention	COUNT(DISTINCT ...), DATEDIFF(), Nested CASE WHEN
4. Pareto Portfolio Analysis	SKU & Inventory Management	SUM() OVER(ORDER BY ...), Window Functions, Running %
